

HEALTH AND ANATOMY

1. Which body system is responsible for movement?
 - A. Nervous system
 - B. Muscular system
 - C. Skeletal system
 - D. Cardiovascular system
2. Which function of the skeletal system serves improved performance in physical exercise?
 - A. As an internal organ
 - B. As producer of blood cells
 - C. As a lever
 - D. As a body framework

Rationalization:

Your muscles attach to your bones via tendons. When your muscles contract, your bones act _____ while your joints form a pivot point. The interaction of bones and muscles contributes to the wide range of movements your body is capable of making.

3. It consists of the bones that form the axis of the body and support and protect the organs of the head, neck and trunk.
 - A. Cranial
 - B. Axial
 - C. Appendicular
 - D. Sternum

Rationalization:

Axial - forms the central, vertical axis of the body.

Appendicular - upper and lower limbs (126 bones)

4. Bones of the spinal column
 - A. Long bones
 - B. Short bones
 - C. Flat bones
 - D. Irregular bones

Rationalization:

_____ - vary in shape and structure and therefore do not fit into any other category (flat, short, long, or sesamoid). They often have a fairly complex shape, which helps protect internal organs.

Rationalization:

- ❖ Long bones:
- ❖ Short bones:
- ❖ Flat bones:

5. The type of bone that usually functions as a lever.
 - A. Flat bone
 - B. Short bone
 - C. Irregular bone
 - D. Long bone

SEPTEMBER 2026 LICENSURE EXAMINATION FOR TEACHERS

6. Which of the following is not a bone of the shoulder?
- A. Coccyx
 - B. Humerus
 - C. Scapula
 - D. Clavicle
7. The only bone in the body that does not form a joint with any other bone.
- A. Skull
 - B. Hyoid
 - C. Ossicles
 - D. Sacrum
8. How many bones does a new born baby have?
- A. 102
 - B. 205
 - C. 126
 - D. 350
9. What is the bone that protects the organs of your torso from injury and serves as a connection point for other bones and muscles?
- A. Sternum
 - B. Scapula
 - C. Clavicle
 - D. Humerus
10. Complete the analogy: Longest bone: Femur:: Strongest bone: _____.
- A. Tooth
 - B. Thigh bone
 - C. Sternum
 - D. Skull
11. What is another name for "flat feet"?
- A. Pes planus
 - B. Pes cavus
 - C. Pes equinus
 - D. Hallux rigidus
12. An excessive curvature of the thoracic spine
- A. Lordosis
 - B. Kyphosis
 - C. Scoliosis
 - D. Osteoporosis

Rationalization:

Pes cavus - characterized by high arch of the foot that does not flatten with weightbearing.

Pes equinus - foot with an abnormally high plantar longitudinal arch

Hallux rigidus - sometimes called "big toe arthritis."

Rationalization:

FALCULAR TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW
SEPTEMBER 2026 LICENSURE EXAMINATION FOR TEACHERS

Kyphosis - excessive curvature in the thoracic spine that leads to a rounded upper back. Kyphosis can affect patients of all ages.

Lordosis - is the inward lordotic curvature of the lumbar and cervical regions of the human spine.

Scoliosis - sideways curvature of the spine that most often is diagnosed in adolescents.

13. Which of the following applies force to the bone to create movement?

- A. Tendons
- B. Muscles
- C. Ligaments
- D. Joints

Rationalization:

- ❖ _____ – Connect muscles to bones for movement.
- ❖ _____ – attaches bones to other bones to hold structure.
- ❖ _____ – Points where bones connect that cause movement.

14. A stretched or torn muscles or tendons is called?

- A. Strain
- B. Sprain
- C. Fracture
- D. Dislocation

15. Which property of muscles explains the concept of “withdrawal reflex” when you touch something hot?

- A. Contractility
- B. Excitability
- C. Extensibility
- D. Elasticity

Rationalization:

- _____ - ability of muscle cells to forcefully shorten. Contractility allows muscle tissue to pull on its attachment points and shorten with force.(muscles can only pull, never push.)
- _____ - ability to respond to a stimulus, which may be delivered from a motor neuron or a hormone.
- _____ - ability of a muscle to be stretched or extended.
- _____ - is the ability to a muscle to return to its original length when relaxed

16. An involuntary muscle, hollow organs like small intestines and blood vessels.

- A. Smooth Muscles
- B. Skeletal Muscles
- C. Cardiac Muscles
- D. Arm Muscles

FALCULAN TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW
SEPTEMBER 2026 LICENSURE EXAMINATION FOR TEACHERS

Rationalization:

- ❖ _____ **muscle** cells are located in the walls of the heart, appear striped (striated), and are under involuntary control.
- ❖ _____ **muscle** fibers are located in walls of hollow visceral organs (such as the liver, pancreas, and intestines), except the heart, appear spindle-shaped, and are also under involuntary control.
- ❖ _____ **muscle** fibers occur in muscles which are attached to the skeleton. They are striated in appearance and are under voluntary control.

17. The following are basis of naming a muscle except?

- A. Shape
- B. Function
- C. Strength of contraction
- D. Sites of attachment

18. How do pairs of muscles work to produce body movements?

- A. Stays stagnant
- B. Act in opposite direction
- C. Acts the same direction
- D. Pushes each other

Rationalization:

Skeletal muscles only pull in one direction. For this reason, they always come in pairs. When one muscle in a pair contracts, to bend a joint for example, its counterpart then contracts and pulls in the opposite direction to straighten the joint out again.

Example: the biceps shorten to bend the elbow at the same time its opposite muscle, the triceps, lengthen to allow the movement to occur.

19. The muscle in the upper arm used as the injection site

- A. Biceps
- B. Triceps
- C. Deltoid
- D. Trapezius

20. What muscle is responsible for chewing the food?

- A. Orbicularis Oris
- B. Mandible
- C. Sternocleidomastoid
- D. Gastrocnemius

21. A powerful shoulder abductor used to raise the arm overhead.

- A. Deltoid

FALCULAR TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW
SEPTEMBER 2026 LICENSURE EXAMINATION FOR TEACHERS

- B. Pectoral
- C. Trapezius
- D. Biceps Brachii

Rationalization:

Biceps – flexes forearm in all positions

Pectoral – adducts and medially rotates humerus

Trapezius – elevates, retracts, and rotates scapula

22. Flexion of the knees and extension of the hips are function of which muscle?

- A. Gluteus maximus
- B. Hamstring
- C. Quadriceps
- D. Gastrocnemius

Rationalization:

Gluteus maximus - movement of the hip & thigh

Quadriceps- knee extension, Hip Flexion

Gastrocnemius – Plantar flexes foot, flexes knee

23. The largest muscle that generally gives the body its beautiful shape is the?

- A. Gastrocnemius
- B. Masseter
- C. Gluteus
- D. Tongue

24. Which pair of muscle actions are involved in the pose of Rose when Jack held her at the tip of the Titanic?

- A. Flexion and abduction
- B. Extension and abduction
- C. Flexion and adduction
- D. Extension and adduction

Rationalization:

- A. Pronation –
- B. Supination –
- C. Abduction –
- D. Adduction –
- E. Extension –
- F. Flexion –
- G. Circumduction –
- H. Rotation –

25. It is the posture of boys when upset or sad.

- A. Slouched

FALCULAR TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW
SEPTEMBER 2026 LICENSURE EXAMINATION FOR TEACHERS

- B. Elevated shoulder
- C. Supination
- D. Adduction

26. The degree of motion at a joint is determined by?

- A. the amount of synovial fluid in a joint
- B. the number of bones around a joint
- C. the bone shape and joint structure
- D. the unusual amount of exercise

27. The carpometacarpal joint that moves the thumb while texting a message on your cellphone is?

- A. Gliding
- B. Ball and socket
- C. Saddle
- D. Hinge

Rationalization:

❖ _____ **Joints** - have two basic types of movement, known as flexion-extension and abduction-adduction.

❖ _____ **Joints** - smooth surfaces that can slip over one another.

Examples are the joints in your wrist and ankle.

❖ _____ **Joints** - Permitting movement in all directions, it features the rounded head of one bone sitting in the cup of another bone.

Examples include your shoulder joint and your hip joint.

❖ _____ **Joints** - is like a door, opening and closing in one direction, along one plane.

Examples include your elbow joint and your knee joint.

❖ _____ **Joints** - immovable joints which connect most of the bones in the skull.

28. The Achilles tendon is relaxed and the anterior tibial and extensor tendon are stretched

- A. Provation
- B. Dorsiflex
- C. Plexeur tendon
- D. Plantarflex

Rationalization:

_____ - this movement involves flexing the foot upwards towards the shin, which stretches the anterior tibial and extensor tendons while the Achilles tendon (which connects the calf muscle to the heel bone) relaxes.

_____ : - foot points downward, as when pressing a pedal or standing on tiptoe, which contracts the Achilles tendon and relaxes the anterior tibial and extensor tendons.

29. Muscle fatigue is caused by a build-up of?

- A. ATP
- B. Oxygen
- C. Lactic Acid
- D. Glycogen

30. Which of the following system transport gases and nutrients needed by all parts of the body and bring wastes from the multitudes of cell?

- A. Digestive system
- B. Excretory system
- C. Circulatory system
- D. Endocrine system

31. The blood vessel that supplies nutrient to the brain is the_____

- A. Jugular vein
- B. Aorta
- C. Carotid artery
- D. Brain stem

Rationalization:

- ❖ _____ - are two large blood vessels that supply oxygenated blood to the large, front part of the brain.
- ❖ _____ - connects the cerebrum and cerebellum to the spinal cord.
- ❖ _____ - any of several veins of the neck that drain blood from the brain, face, and neck,
- ❖ _____ - the main artery that carries blood away from your heart to the rest of your body

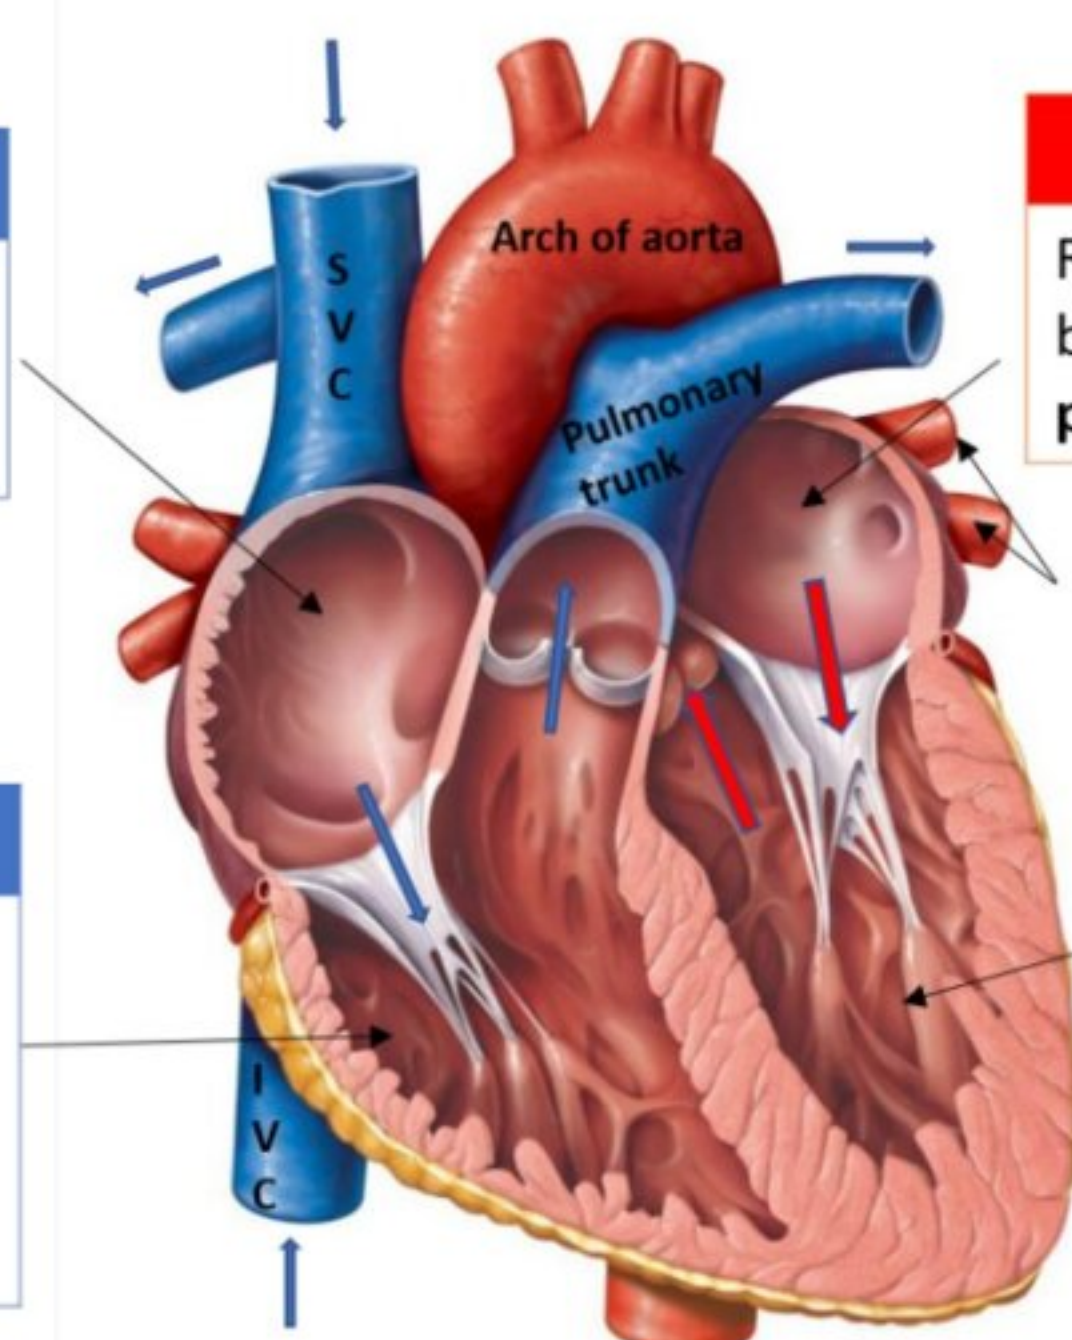

32. Which receives the impure blood coming from the different parts of the body through the superior and inferior vena cava?

- A. Right atrium
- B. Left atrium
- C. Left ventricle
- D. Right ventricle

Rationalization:

RIGHT ATRIUM
Receives deoxygenated blood from the body via **SVC, IVC and coronary sinus**

RIGHT VENTRICLE
Receives deoxygenated blood from right atrium via **Right atrioventricular orifice** and sends it to lungs via **Pulmonary trunk.**

LEFT ATRIUM
Receives oxygenated blood from the lungs via **pulmonary veins.**

LEFT VENTRICLE
Receives oxygenated blood from left atrium via **Left atrioventricular orifice** and sends it to body via **aorta.**

33. A person's blood pressure is generally taken with a cuff around the humerus.
- A. Pulmonary artery
 - B. Brachial artery
 - C. Superior mesenteric artery
 - D. Radial artery
34. To calculate your heart beat, feel the pulse of the artery at the wrist with the fingertips of the other hand, time the pulse for 15 seconds and ____.
- A. Multiply by 4
 - B. Multiply by 10
 - C. Multiply by 6
 - D. Multiply by 5
35. What is the normal resting heart rate of an individual?
- A. 120 beats per second
 - B. 90 beats per second
 - C. 90 beats per minute
 - D. 120 beats per minute
36. The following are areas where you can feel a pulse, except:
- A. Neck
 - B. Inside the arm
 - C. Cervix
 - D. Wrist
37. There are four critical areas of the body. What are they?
- A. Face, feet, hands, and genitals
 - B. Torso, genitals, feet, and legs
 - C. Hands, feet, arms and legs
 - D. Head, chest, hand, and genitals
38. Which of the following controls and modulates all the activities in the body?
- A. Muscles
 - B. Heart
 - C. Bones
 - D. Brain
39. The part of the brain that helps control voluntary movement of muscles such as coordination, posture, and balance.
- A. Cerebrum
 - B. Brain stem
 - C. Midbrain
 - D. Cerebellum

40. The enlarged upper part of the spinal cord composed in large part of the fibers that connect various parts of the body and brain:

- A. Medulla oblongata
- B. Cerebrum
- C. Cerebellum
- D. All of the above

41. The main alimentary canal of the digestive tract consists of the_____.

- A. Gullet
- B. Mouth
- C. Esophagus
- D. All of the above

Rationalization: **COMPONENTS OF ALIMENTARY CANAL**

- _____ – where **digestion begins** (chewing, saliva)
- _____ – connects **mouth to esophagus**
- _____ – **food pipe to the stomach**
- _____ – **churns and digests** food with acid and enzymes
- _____ – **absorbs nutrients**
- _____ – **absorbs water, forms waste**
- _____ and _____ – **stores and removes waste**

NOTE: **Accessory organs** are organs which are not part of the digestive system; however, they aid in the digestion process by performing many secondary functions. **Pancreas, gall bladder and liver** are the three accessory organs in digestive system.

42. The so called "Master Gland" that manufactures several hormones important to physical growth and development:

- A. Thymus gland
- B. Pituitary gland
- C. Adrenal gland
- D. Thyroid gland

43. Endocrine glands secrete products directly into the blood stream which carry them to all parts of the body. The gland found above the kidney is called _____.

- A. Pancreas
- B. Adrenals
- C. Pituitary
- D. Thyroid

Rationalization:

_____, also known as suprarenal glands, are small, triangular-shaped glands located on top of both kidneys. They produce hormones that help regulate your metabolism, immune system,

blood pressure, response to stress and other essential functions.

44. What group of cells secretes the hormone that enables a sugar to be stored in the liver?

- A. Thalamus
- B. Thyroids
- C. Islets of Langerhans
- D. Parathyroids

45. What is the organ that produces insulin?

- A. Liver
- B. Kidney
- C. Pancreas
- D. Bladder

46. Helps in the process of removing waste from the bloodstream:

- A. Lungs
- B. Liver
- C. Kidney
- D. Perspiration

47. Water is vital to all living things. What is the percentage of water in our body?

- A. 65 to 70%
- B. 75% to 100%
- C. 55% to 65%
- D. 50% to 80%

48. What percent are body weights and fats in an average human person?

- A. 10-15%
- B. 20-25%
- C. 30-45%
- D. 45-50%

49. Unit of living material that is the base building block of life.

- A. Ligaments
- B. Cells
- C. Nerves
- D. Muscles

50. By far, what is the most important sense organ?

- A. Eyes
- B. Ears
- C. Nose
- D. Tongue

51. What is the medical term for the eye problem in which a person's vision is blurred when looking at close objects, but clear when looking at distant objects?

- A. Astigmatism
- B. Myopia
- C. Presbyopia
- D. Hyperopia

Rationalization:

Rationalization

- ❖ _____ - nearsightedness
- ❖ _____ - farsightedness
- ❖ _____ – causes blurred vision at all distances.
- ❖ _____ – vision loss due to aging.

52. Use of cucumbers over eyelids before going to sleep at night will help ____.

- A. Enhance sleeping habits
- B. Prevent eye damage
- C. Prevent puffiness
- D. Dilate pupils

53. The "ossicles" are found in the ____.

- A. Trunk
- B. Appendix
- C. Ears
- D. Skull

54. Which of the following is the safest way to clean your ears?

- A. Use advertised cotton buds
- B. Clean your ears when taking a bath
- C. Clean your ears once a week
- D. Clean your ears with wash cloth using your fingers

55. What is important for teeth care, particularly for areas the toothbrush cannot reach?

- A. Plaque removal
- B. Flossing
- C. Use of ordinary salt
- D. Use of fluorine

56. What is NOT directly necessary in maintaining dental care and hygiene?

- A. Proper eating habits
- B. Tooth braces
- C. Brushing of teeth

FALCULAR TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW

D. Dental check-up

57. A good dental habit is one that requires a person to see the dentist at least _____ to check dental problems.

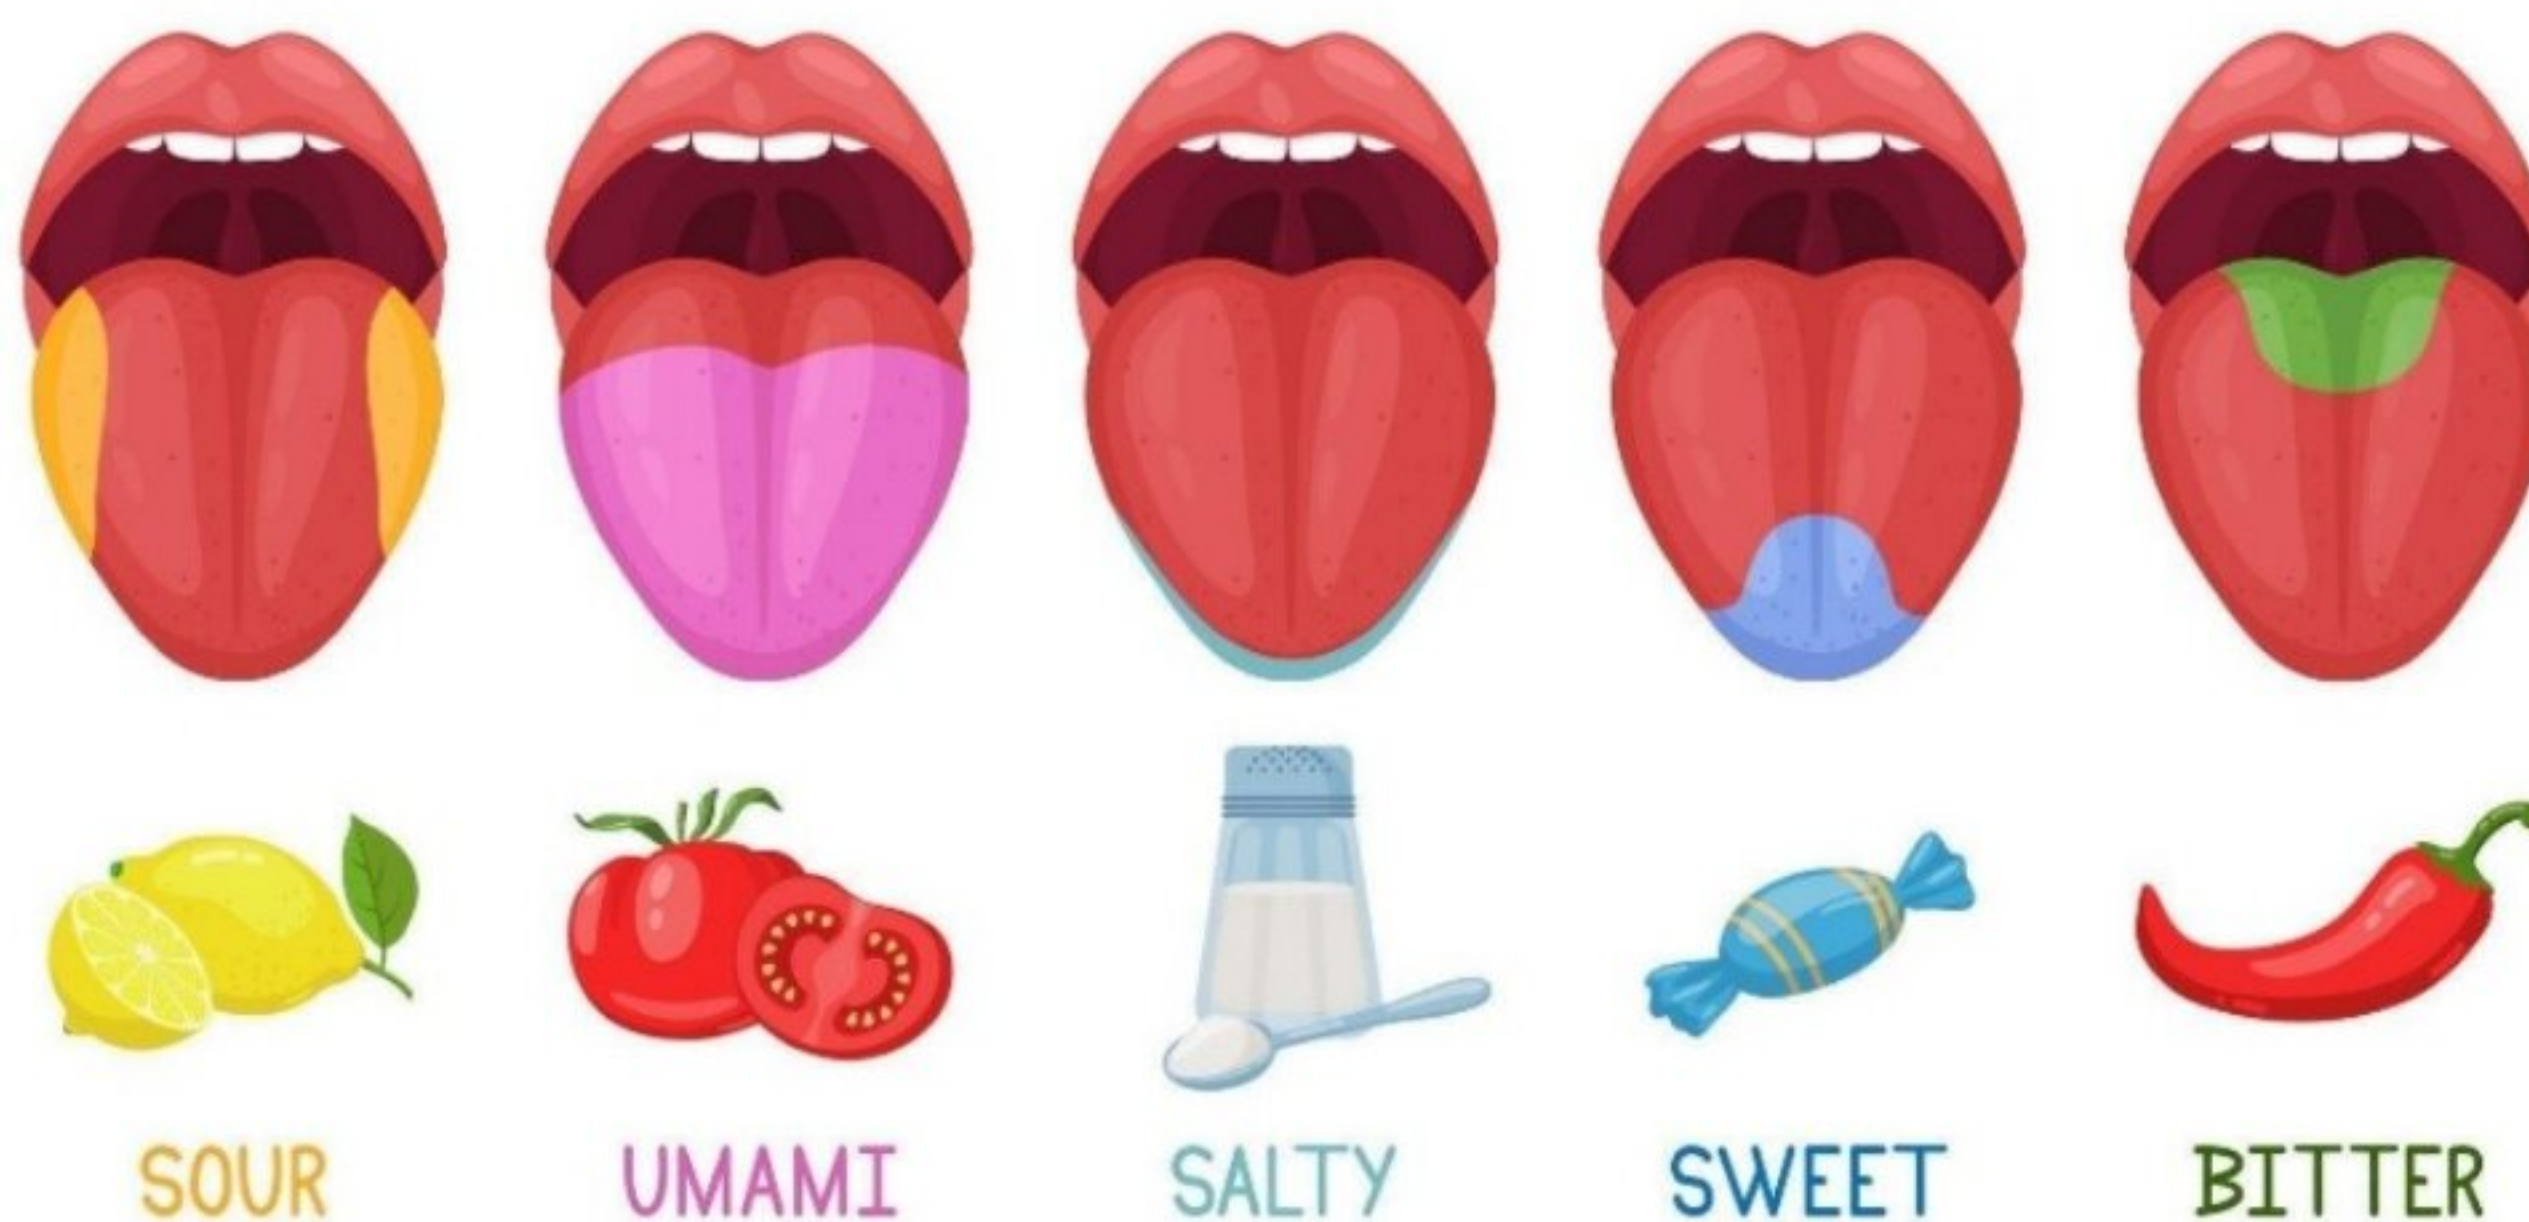

- A. Once a year
- B. Once in two years
- C. Thrice a year
- D. Twice a year

58. Which among the following body part creates a foul smell when someone has halitosis?

- A. Feet
- B. Armpit
- C. Mouth
- D. Groin

59. Which side of the tongue is receptive to bitter taste?

- A. Rear
- B. left and right side
- C. center
- D. front

60. Which is the first organ of the body that shuts down when a person dies?

- A. Brain
- B. Heart
- C. Thyroid gland
- D. Liver

61. Which of the following has the major task of protecting the underlying tissues?

- A. Integumentary system

FALCULAR TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW

- B. Endocrine system
- C. Nervous system
- D. Skeletal system

62. If your skin is oily, the you are prone to pimples, blackheads, and whiteheads. The best way to treat oily skin is _____.

- A. To exfoliate
- B. Not use moisturizer
- C. To use toner to help with that tight and flaky feeling
- D. To wash your face twice a day with gentle non-foaming cleanser and warm water

63. Even with a strict diet, Trisha easily gets fat and finds it hard to lose some weight. Which body type does Trisha have?

- A. Endomorph type
- B. Ectomorph type
- C. Mesomorph type
- D. Polymorph type

64. The body parts used to train the body to use oxygen more efficiently in swimming.

- A. Muscles and Abdomen
- B. Nose and Diaphragm
- C. Heart and Lungs
- D. None of the above

65. The Kidney Punch area is located at the back within the?

- A. Thoracic region
- B. Sacral region
- C. Cranial region
- D. None of the above

66. A PE teacher reviews a popular social media exercise challenge that involves repetitive deep knee bend with significant forward lean. what is the primary concern for safety?

- A. Not effectively build cardiovascular endurance
- B. Excessive and potentially harmful stress of knee joints and lumbar spine
- C. Requires equipment not available in school
- D. Only suitable for athletes

67. During the discussion of the muscle group, a grade 8 student struggles to understand the concept of muscle antagonistic. Which teaching strategy is the most effective for a teacher to clarify this concept?

- A. Showing a diagram with muscles attachment, labelling the muscles accordingly.

FALCULAN TWINS' REVIEW CENTER
BPED MAJORSHIP REVIEW
SEPTEMBER 2026 LICENSURE EXAMINATION FOR TEACHERS

- B. Assign a student to a partner who will explain the concept with relatable terms.
 - C. Explain to them that muscles working together have opposite actions, biceps (agonist) triceps (antagonist) with a curl arm live demonstration.
 - D. Tell the student to look up the word "antagonistic" in the dictionary and memorize the definition of the concept.
68. In evaluating new exercise, a P.E teacher primarily considers "biomechanical efficiency". What does this term refer to?
- A. there's minimal wasted energy or undue stress with the exercise
 - B. the cost of equipment needed for the exercise
 - C. how quickly exercise can be completed
 - D. popularity of exercise in social media
69. What is the proper way to teach body proportion in accordance with ethical practice?
- A. Promoting positive body image
 - B. Comparing students' bodies to professional models
 - C. Emphasizing weight loss over health
 - D. Critiquing students' appearances in class
70. A Grade 5 student asked, "Why do I breathe so hard when I run?". Which best response translates the physiological concept to the language appropriate for the age group?
- A. Your diaphragm and intercostal muscle is experiencing increased demand in work due to heightened metabolic waste product accumulation, leading to elevated respiratory rate.
 - B. Your body is in an aerobic state, causing build up of lactic acid and in need of more oxygen debt repayment
 - C. It's due to the increased activity of the autonomic nervous system stimulated by the respiratory control center of the brain stem
 - D. When you run, your body requires more oxygen to make more energy, so your lungs and heart work harder and faster to get it to them, and take away the 'used air'.

"Reread if you're confused. Rest if you're tired. Pray if you're down. But, never give up!"
